Is this a good sim.Q: Synchronized private object field: is this a bad practice? I have a sample class: class MyClass { private Object o = new Object(); public void test() { o.doSomething(); } } I was wondering if using a private Object o (which is synchronized in order to avoid Concurrent Modification Exception) to synchronize access to the doSomething() method is a bad practice (and why)? Thanks! A: Using synchronized on a private instance variable is not, as far as I know, a bad practice. However you should be aware that it does not fully synchronize the access to the shared object. Specifically, you need to call your method with the lock explicitly because if another thread calls the method without the lock, the exception you're catching may not be raised. synchronized(o){ o.doSomething(); } For more details, refer to Oracle's

documentation on Private Members. A: You should wrap this.o in a synchronized block. Otherwise, you can have issues with threads calling o.doSomething() concurrently. The reason you should wrap it in a synchronized block is that is is a private instance variable, and you don't want to prevent two threads from calling the function. For more information, see the section on Private Fields. MiR-139 targets SP1 to inhibit inflammation in LPS-induced mice. MicroRNAs (miRNAs) are involved in biological and physiological processes including inflammation. Inflammation plays a major role in the pathogenesis of metabolic syndrome, such as insulin resistance and obesity. MicroRNA 139 (miR-139) is found to regulate inflammatory responses in different cancer cells. But the expression and role of miR-139 in the pathogenesis of inflammation related metabolic disorders remains unclear. Thus, the aim of this study was to determine the role of miR-139 in
